ADVANCED SUSPENSION TECHNOLOGY

Öhlins High Speed Compression Adjuster Kit

The new High Speed Compression Adjuster (HSC) kit is designed for use in Öhlins WCJ series shock absorbers in both front and rear configurations. This kit uses the same “blow-off” concept originally used in the popular TT44 series of shock absorbers. A spring-loaded poppet valve opens to “bleed-off” compression forces depending on the amount of pre-load on the spring. This pre-load is adjusted by a detent adjustment wheel in the end eye. The HSC kit is perfect for use on rough tracks, and road courses with high curbs, or anywhere less high speed compression is desired.

Part Number	Description	Retail price
WCJKIT 01	WCJ HSC Kit, Front	\$369.95
WCJKIT 02	WCJ HSC Kit, Rear	\$369.95
